To Whom It May Concern:

Currently the bottom of the existing billboard on the U-Haul site is approximately 26.50' feet above the existing ground at the support post. The top of the billboard is approximately 43.50' above the existing ground, hence a 17' feet tall billboard. The grade of the adjacent off ramp is approximately 21' feet above the existing grade at the support post. The adjacent bridge is approximately 24' feet above the existing grade. Before the new freeway was built the billboard was approximately 26' feet above the freeway, in order to preserve the same aspect as before it is my professional opinion that the billboard should be raised approximately 26' so that East and West bound lanes on Interstate 95 have nearly the same aspect as before.

Our measurements are base on existing conditions in the field please see attached "exhibit B" & pictures obtained of the area.

Robert Barnes P.L.S.
